IFMA™ Greater Phoenix Chapter
International Facility Management Association

July 14, 2021 Member Meeting
The Ups & Downs of UV-C Germicidal Irradiation

Ye Zhang

Ye Zhang joined GLHN in February 2019 as the Electrical PE for the Phoenix office and now leads GLHN's Electrical department. Her expertise encompasses electrical building systems including lighting, power, communications, and security. Ye prepares layouts and specifications for electrical building systems and construction cost estimating. She coordinates design activities with clients and multi-discipline team members. Ye also serves as the Programs Chair of Women in Healthcare Phoenix Chapter. She is passionate about supporting and empowering growth of all women to reach their full potential.

Joyce Kelly

Joyce Kelly fulfills multiple roles at GLHN from orchestrating Architects and Engineers to design LEED certified buildings to managing Commissioning projects. She specializes in the areas of lighting & controls and building enclosure. Joyce also performs facility condition assessments and writes the firm's Measurement and Verification (M&V) plans to assess whether buildings' actual energy performance matches their design intent. She has worked for building owners, engineers, and contractors in architectural, lighting and controls, and low voltage systems design. Joyce teaches workshops on networked lighting controls to SRP's Trade Allies and writes articles on responsible design and building science. For fun, she plays a large horn in a big band and contemplates attaching a UV-C device over its bell to deactivate pathogens and improve her tone.
